- Use of Mastery for Learning and Glasser Choice Theory

DIGITAL LEARNING PHILOSOPHY

My vision for technology in the classroom is to create an environment where students can learn at their own pace, actively seeking out new information while allowing their curiosity to direct their learning. I believe in providing an interactive, stimulating experience where students can use the tools and resources given to them to be creative and independent in their learning process. I strive to empower students to become ethical global citizens who take ownership in their life-long learning journey.

As a digital learning facilitator, I do my best to be honest, transparent, forthcoming, and active in two-way communication with all school community members. I believe it is important to foster a culture that celebrates diversity and a difference of opinions. I believe every teacher has something meaningful to offer and should be valued as an equal and honored as a professional. I coach teachers by being flexible and differentiating to meet each teacher's needs. I aim to be collaborative, creative and committed to encouraging and supporting teachers in creating quality integrated lessons that engage students and enhance learning.
